SUMMARY

System Engineer with 3.5+ years of proven experience delivering enterprise-grade .NET solutions for mission-critical environments. Demonstrated expertise in backend architecture, CQRS patterns, and managing distributed offshore teams. Achieved E2 (Associate Consultant) competency in Generative AI at TCS with passion for exploring LLMs and machine learning through personal projects. Strategic thinker focused on translating complex business requirements into scalable technical solutions while continuously expanding capabilities in AI/ML integration and advanced problem-solving methodologies.

TECHNICAL SKILLS

Core Languages: C# (.NET 8), Python, SQL (T-SQL, MS SQL Server), HTML/CSS, JavaScript

Backend Architecture: ASP.NET Core, CQRS Pattern, Microservices, RESTful APIs, Entity Framework Core

Data & Databases: MS SQL Server, Oracle, Query Optimization, PARTITION, PIVOT, Window Functions

AI/ML Learning: LLMs (Ollama/Phi-3), NLP, Predictive Modeling, Scikit-learn, FastAPI, Power BI

Tools & DevOps: Azure DevOps, Docker, RabbitMQ, Hangfire, CI/CD Pipelines

Testing: xUnit, Moq, Unit Testing, Integration Testing

EXPERIENCE

System Engineer

[Tata Consultancy Services](#)

Aug 2024 – Present

Kolkata, WB

- Led offshore engineering team of 4 developers delivering enterprise-grade .NET 8 solutions with CQRS architecture handling 100k+ daily transactions
- Architected CQRS-based microservices pattern using Hangfire for asynchronous job processing and RabbitMQ for event-driven workflows, improving system scalability and decoupling command/query responsibilities
- Collaborated directly with client on technical architecture decisions and project design, translating business requirements into scalable .NET solutions and ensuring alignment with critical infrastructure compliance standards
- Eliminated 40% technical debt through advanced MS SQL optimization using PARTITION, PIVOT, and window functions; reduced infrastructure costs and enhanced system stability
- Architected comprehensive testing framework using xUnit and Moq, delivering enterprise-level unit test coverage (85%+) ensuring reliability across mission-critical services
- Developed robust .NET testing infrastructure enabling faster release cycles and improved code quality across core modules
- Maintained legacy Java/Oracle systems ensuring stability and performance across inherited platform components
- Achieved E2 (Associate Consultant) competency in Generative AI, demonstrating expertise in LLM applications and advanced problem-solving methodologies
- Established CI/CD automation pipelines leveraging Azure DevOps reducing deployment time by 60%, enabling continuous delivery to production

Assistant System Engineer / Trainee

[Tata Consultancy Services](#)

Aug 2022 – Aug 2024

Kolkata, WB

- Developed and deployed 15+ production RESTful APIs for client digital transformation initiative; reduced retrieval latency by 20% directly impacting user experience
- Optimized SQL query performance delivering 30% improvement through advanced performance tuning and database schema enhancement, reducing infrastructure costs
- Accelerated product development lifecycle by delivering production-ready MVP within 1-month sprint cycle, enabling rapid client deployment

GCP Intern

[Cognizant](#)

Mar 2022 – Jul 2022

Kolkata, WB

- Contributed to development of real-time ETL infrastructure on GCP platform processing high-volume data workflows exceeding 1TB monthly throughput

EDUCATION

Bachelor of Technology in Electrical Engineering <i>Academy of Technology (MAKAUT)</i> CGPA: 9.13	2018 – 2022 Hooghly, WB
ISC – Science <i>Abbot Shishu Hall</i>	2018 Hooghly, WB
ICSE – Secondary <i>Don Bosco Bandel</i>	2016 Bandel, WB

PERSONAL AI/ML PROJECTS

AI Career Transition Predictor

Angular, FastAPI, Python, Machine Learning

- Constructed a full-stack application using Angular and FastAPI to quantify career transition viability
- Evaluates professional inputs to forecast market demand and salary shifts using predictive modeling
- github.com/Al-Career-Transition-Predictor

OncoStream: Predictive Cancer Analytics

Python, Power BI, DAX, Data Engineering

- Developed a Python pipeline to simulate 15,000 clinical records, mapping correlations between biomarkers and patient survival
- Built an interactive Power BI dashboard utilizing DAX for real-time survival probability and prevalence analytics
- github.com/OncoStream

Sherlock AI: Forensic Interrogation Engine

Python, .NET, Ollama, Power BI

- Created a hybrid Python/.NET pipeline leveraging local LLMs (Phi-3) to identify suspect statement anomalies
- Converted qualitative forensic insights into quantitative risk metrics via Power BI for investigative use
- github.com/Sherlock-AI

Greenhouse Monitoring and Control (Final Year Project)

IoT, ESP8266, Raspberry Pi

- Architected an end-to-end IoT ecosystem for greenhouse automation utilizing ESP8266 and Raspberry Pi to optimize crop yield
- Automated real-time monitoring of environmental parameters including Temperature, Humidity, Soil Moisture, and Fire Detection through multisensor integration

Smart Blind Stick

Arduino, IoT, Research Paper

- Designed an IoT-enabled navigation device for the visually impaired using Arduino haptic feedback
- github.com/Smart-Blind-Stick

CERTIFICATIONS & AI/ML LEARNING

- Achieved: E2 (Associate Consultant) Competency in Generative AI - TCS
- Completed: Python for Data Science and Machine Learning Bootcamp (Jose Portilla, Udemy)
- Completed: Python for Everybody Specialization (Coursera) — Data Structures, Web Data, and Databases
- Completed: Practical Cybersecurity (LinkedIn Learning)
- In Progress: AZ-204 Microsoft Azure Developer, Microsoft Power BI: PL-300
